

InsightAI

Feature Guide

Complaint intelligence for classify, review,
and resolution SLA tracking.

[Demo walkthrough](#) • [v2.1](#) • [FastAPI + Streamlit + ML](#)

[Billing](#) • [Shipping](#) • [Service](#) • [Technical](#)

Download sample CSV from the sidebar to run the guided demo.

Why & who

Purpose, users, and your own data

Why use InsightAI

- Auto-classify complaint text into Billing, Shipping, Service, Technical.
- Send only uncertain predictions to a human Review Queue.
- See volume, category mix, and resolution SLA on one Overview.
- Search, filter, and export the corpus; test new wording in Live Classify.

Who can use it

- Support / CX leads who need faster triage of written complaints.
- Operations analysts tracking SLA and backlog health.
- Product or data teams demoing complaint intelligence workflows.

Will other complaint files work?

Yes. Upload any CSV that includes these columns: text, created_at, resolved_at.

- text - the complaint message (required).
- created_at - when it was filed (required).
- resolved_at - when it was closed, or blank if still open.

Tip

The model is trained on English support-style text in those four categories. Very different domains may need retraining for best accuracy.

Categories the model predicts

Billing

Shipping

Service

Technical

Low-confidence or ambiguous predictions are flagged Needs Review so humans can Approve or Reject before analytics treat them as final.

4-step demo path

1 Download sample CSV

Use the sidebar button - 48 held-out demo complaints, not the training file.

2 Upload + Ingest

Start an async job. Watch progress, then open Overview when it completes.

3 Triage the queue

Jump from Needs Review into Review Queue. Approve or Reject with a corrected label.

4 Explore + Live Classify

Filter the corpus, export CSV, then try sample chips in Live Classification.

Tip

Do not upload data/complaints.csv for demos. That file is for `python -m ml.train` only.

Overview

- Why / Who strip plus KPI cards for volume, SLA, review load, median time.
- Colored category bars and system alerts for actionable risk.
- Triage pending reviews jumps straight into the Review Queue.

Review Queue

- Lowest confidence first. Row selection highlights the triage card.
- Approve keeps the suggestion; Reject saves a different category you pick.
- Human reviews mark feedback for future retraining.

Complaint Explorer

- Labeled filters: Category, Review, Sort - plus search and filtered export.
- Compact timestamps; job IDs stay out of the main grid.

Live Classification

- Paste text or try a sample chip, then Classify.
- Result card: category badge, confidence bar, and runner-up alternatives.

Sidebar controls

- Online / Offline status dot + refresh.
- Download sample CSV - safe demo file.
- Feature guide PDF - this document.
- Upload + Ingest - start classification jobs.
- Settings - optional API key when AUTH_ENABLED=true.

Files that matter

[data/sample_upload.csv](#)

Held-out demo texts (zero overlap with training). Download from UI or copy from the repo.

[data/complaints.csv](#)

Labeled training set for ml.train only. Not for demo uploads.

[Your CSV](#)

Any file with text, created_at, resolved_at columns can be uploaded for classification.

InsightAI workflow: Overview signals risk, Review clears it, Explorer audits the corpus, Live Classify validates new wording.
