

InsightAI

Feature Guide

Complaint intelligence for classify, review,
and resolution SLA tracking.

Demo walkthrough • v2.1 • FastAPI + Streamlit + ML
Billing • Shipping • Service • Technical

Download sample CSV from the sidebar to run the guided demo.

Low-confidence predictions are flagged Needs Review (red semantic state) so humans can approve or reclassify before analytics treat them as final.

4-step demo path

1 Download sample CSV

Use the sidebar button - 48 held-out demo complaints, not the training file.

2 Upload + Ingest

Start an async job. Watch progress, then open Overview when it completes.

3 Triage the queue

Jump from Needs Review into Review Queue. Approve or fix labels in one click.

4 Explore + Live Classify

Filter the corpus, export CSV, then try sample chips in Live Classification.

Tip

Do not upload data/complaints.csv for demos. That file is for `python -m ml.train` only.

Overview

- KPI strip: volume, SLA under 24h, needs-review load, median resolution.
- Colored category bars + donut mix for share-of-volume.
- System alerts for review overload, weak classes, and SLA risk.
- Triage N pending reviews routes you straight into the Review Queue.

Review Queue

- Lowest confidence first. Row selection highlights the triage card.
- Dropdown defaults to the model suggestion - Approve / Submit in one click.
- Human reviews mark feedback for future retraining.

Complaint Explorer

- Labeled filters: Category, Review, Sort - plus search and filtered export.
- Compact timestamps; job IDs stay out of the main grid.

Live Classification

- Paste text or try a sample chip, then Classify.
- Result card: category badge, confidence bar, and runner-up alternatives.

Sidebar controls

- Online / Offline status dot + refresh.
- Download sample CSV - safe demo file.
- Feature guide PDF - this document.
- Upload + Ingest - start classification jobs.
- Settings - optional API key when AUTH_ENABLED=true.
- Footer - app version and loaded model tag.

Files that matter

[data/sample_upload.csv](#)

Held-out demo texts (zero overlap with training). Download from UI or copy from the repo.

[data/complaints.csv](#)

Labeled training set for ml.train only. Not for demo uploads.

[docs/InsightAI_Feature_Guide.pdf](#)

This guide. Regenerate with: `python scripts/generate_feature_guide_pdf.py`

InsightAI is built for a circular workflow: Overview signals risk, Review clears it, Explorer audits the corpus, Live Classify validates the model on new wording.
